

(a) $T \times S$ **(b) $T \times D$** **(c) $D \times S$** **(d) Total loss****(e) Classification****(f) Localization**

— TS — TD — DS — TDS

Pairwise conditional interaction: signed mean and heterogeneity

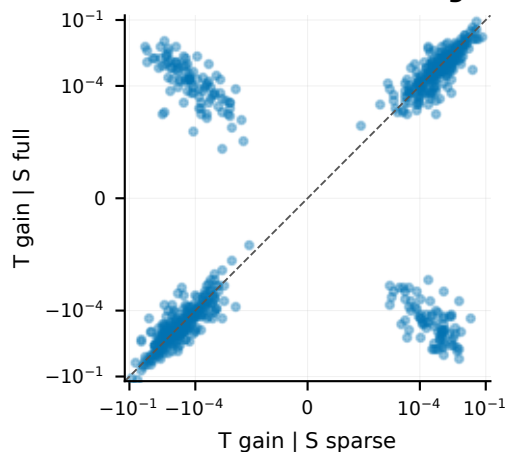

Replay threshold = 0: nonzero percentages are not significance rates.

(a) S choice before and after T**(b) D choice before and after T****(c) Regret of reusing the baseline-context choice (95% CI)**

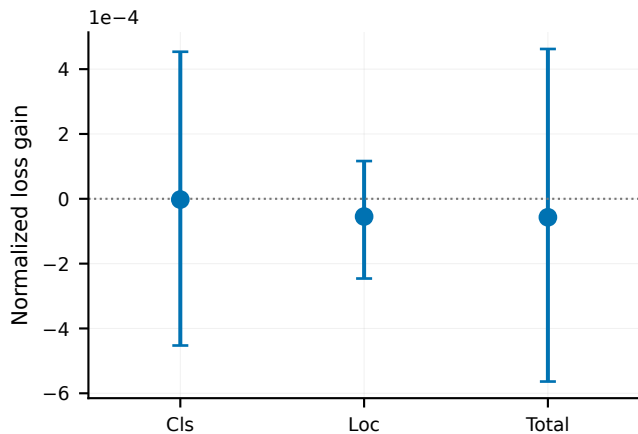

● Reused choice stays optimal

● Reused choice incurs regret

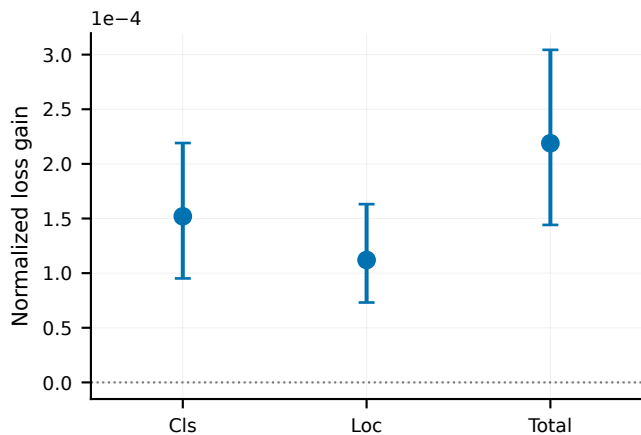

(a) Does S context change T value?

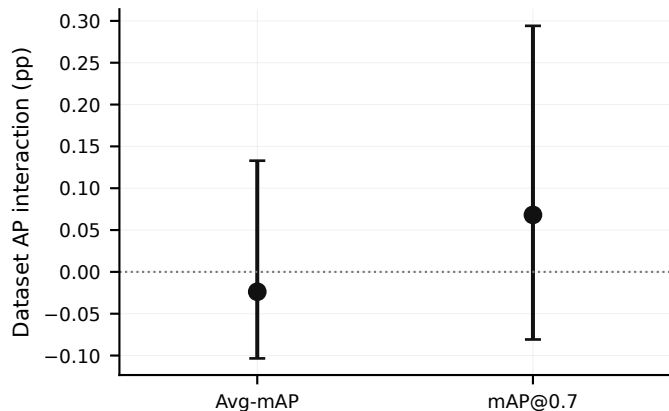

(b) Change in temporal marginal value

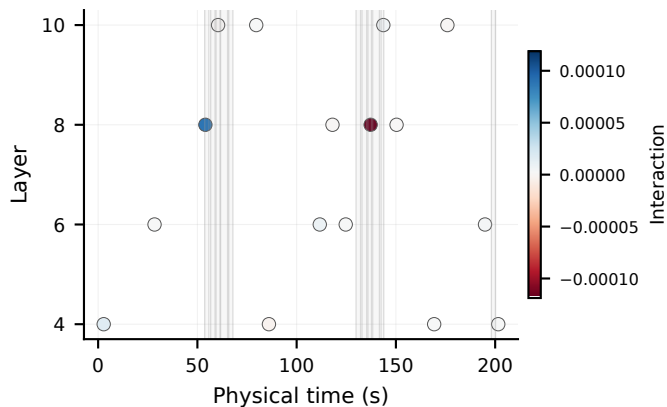

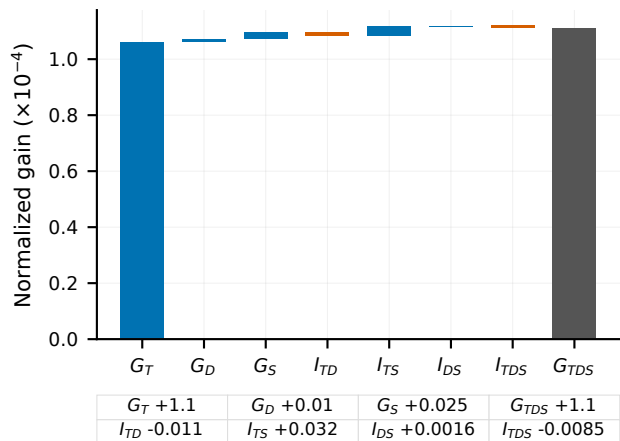

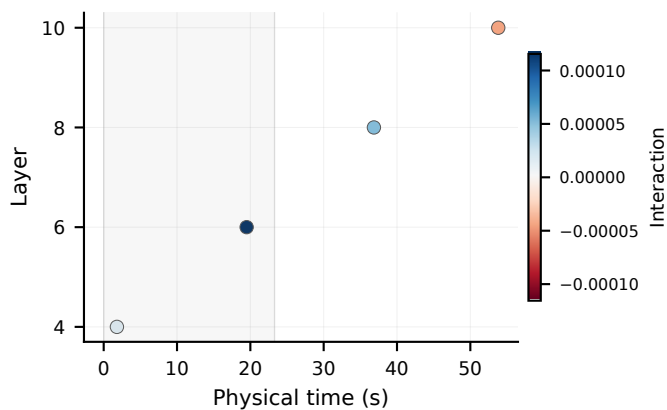

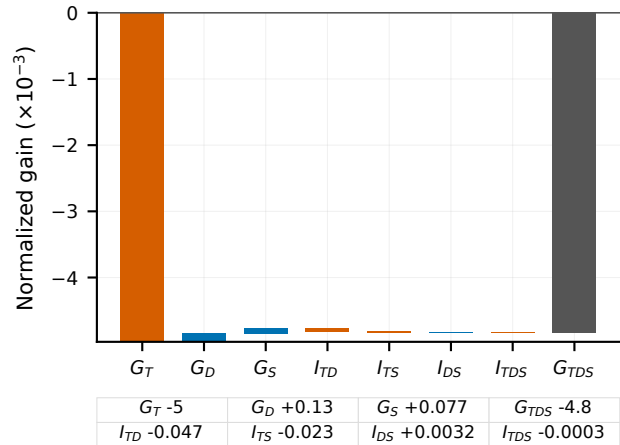

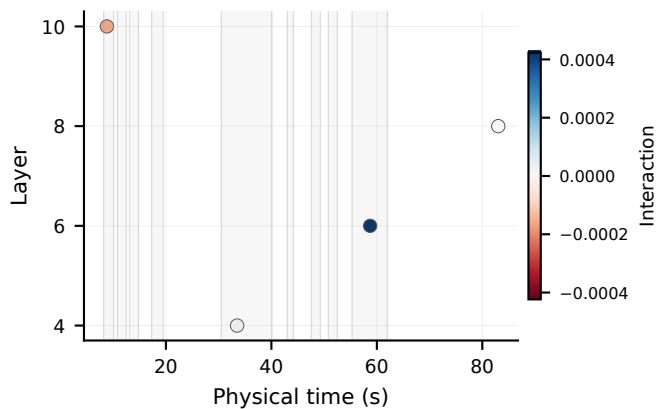

(c) Conditional two-choice regret

(d) Frozen-policy context factorial

(a) T×D measurements: 0001484**(b) Real cube: window 755, layer 8****(c) T×D measurements: 0001080****(d) Real cube: window 486, layer 10****(e) T×D measurements: 0000211****(f) Real cube: window 61, layer 4**
